Aman Arora

7839360842 | engineer.aman529@gmail.com | Gurugram

Summary

Results-driven DevOps Engineer with 6 years of experience architecting, automating, and optimizing mission-critical deployments in multi-cloud environments (AWS, Azure, GCP). Adept in designing secure, scalable CI/CD pipelines, managing container orchestration platforms like Kubernetes, and implementing Infrastructure as Code with Terraform, Ansible, and Helm. Skilled in AI/ML infrastructure, cloud-native services, observability tooling, and SRE practices.

Experience

Accenture India Pvt Ltd | Gurugram
Platform Engineer | 10/2024 - Present

- Designed and deployed cloud-native architectures across AWS and Azure for microservices.
- Built and maintained secure, multi-cloud CI/CD pipelines using GitHub Actions and Terraform.
- Perform end-to-end **Ataccama PaaS product integration**, environment setup, and configuration.
- Onboard users to the **Ataccama platform**, including role-based access control and environment-specific configurations.
- Integrate **Keycloak** as an identity provider for **SSO and authentication** on the Ataccama platform using OIDC/SAML protocols.
- Administer and support platform infrastructure across **AWS Cloud**, ensuring availability, scalability, and security.
- Manage and automate **infrastructure provisioning using Terraform** for consistent and repeatable deployments.
- Set up and manage **Databricks** workspaces, clusters, and user access control for data engineering and analytics teams.
- Develop and maintain **CI/CD pipelines in Jenkins** for building, testing, and deploying applications across dev, test, and prod environments.
- Deploy and manage containerized workloads on **Kubernetes clusters**.
- Optimized Kubernetes environments for cost, scalability, and GPU support.
- Supported MLOps workflows including LangChain, SageMaker, and embedding store deployments.
- Implemented robust observability with Datadog, CloudWatch, and Prometheus/Grafana.

IBM India Pvt Ltd | Mumbai
DevOps Engineer | 03/2023 - 10/2024

- Automating infrastructure provisioning with Terraform and configuration management using Ansible Playbooks.
- Containerized applications using Docker and deployed via Kubernetes (EKS).
- Utilized AWS services, Terraform, and CI/CD tools (GitHub Actions, Jenkins) to streamline software deployment processes.
- Orchestrated microservices using Kubernetes, implementing rolling updates for seamless deployments.
- Implemented scalable microservices architecture using Python, Docker, and Kubernetes.
- Managed secrets and encryption, aligning with organizational compliance and security mandates.
- Led migration of legacy applications to serverless architecture on AWS Lambda.

Ericsson India Global Services Pvt Ltd | Noida
DevOps Engineer/Cloud Engineer | 12/2019 - 03/2023

- Troubleshooting and resolving cloud infrastructure issues, including network connectivity, security configurations, and performance optimization.
- Ensure availability of Production and Development systems based on Amazon Cloud Platform - EC2 and EKS.
- Assisted in migrating on-premises infrastructure to AWS, resulting in improved scalability and cost-effectiveness.
- Provided L2/L3 support and troubleshooting for AWS-based infrastructure and services.
- Conducted root cause analysis and coordinated incident response across global teams.
- Assisted in CI/CD practices improvement and deployment automation.

Skills

AWS, Jenkins, Terraform, Ansible, Ataccama, Databricks, Kubernetes, CI/CD, Platform as a Service, Devops, Git, Platform Engineering, IAM (Identity & Access Management), Secrets Manager, RBAC

Education

United College of Engineering and Research | Prayagraj
Electronics & Communication | 06/2019

Certificates

AWS Certified Solutions Architect Associate, AWS Certified Cloud Practitioner, Azure Fundamentals

Projects & Highlights

- Deploying a **scalable Application** using AWS, Docker, Kubernetes, Git, Terraform, Ansible, and Monitoring with Grafana & Prometheus.
- **Kubernetes** Deployment for a Multi-Tier Application.
- **AI/ML Infrastructure:** Automated LLM-based RAG deployments with vectorDB integration (pgVector, Pinecone).
- **Secure Kubernetes:** Designed multi-tenant EKS clusters with fine-grained RBAC and managed node groups.
- **Cost Optimization:** Reduced cloud spending by 20% through auto-scaling, spot instance usage, and rightsizing.
- **Compliance & Governance:** Built audit-ready pipeline templates with secrets management and logging.
